

COMPOST

Biological Amendment

InTerra Bio Compost is a highly concentrated mixture of beneficial bacterial strain spores capable of producing a wide range of enzymes that degrade materials such as hydrocarbons, organic matter, waste, wastewater components, fats, and oils. Its main applications include plastic degradation, algae control, manure management, septic tanks, and aerated treatment units (ATUs), reducing composting time, lowering COD, reducing suspended solids, controlling odor, and reducing surfactants and wastewater sludge volume.

Compost Benefits:

- ✓ Breaks down waste and chemicals
- ✓ Works across soil, crop, and climate conditions
- ✓ Controls odor, algae, and manure buildup
- ✓ Speeds up composting and reduces sludge volume

General Recommendation:

Application rate is 1 to 2 quarts per acre.

Dosage will vary on the specific crop and crop needs.
