

NO TILL

Biological Amendment

InTerra Bio No Till is a specialized blend of bacterial and fungal microorganisms designed to actively decompose crop residues in cold weather, improve soil conditions, and improve overall soil health.

No Till is an advanced biological and organic tool for crop residue management designed for late or early-season applications. Tailored for no-till farming systems, it accelerates residue breakdown, enhancing soil health, nutrient cycling, and preparation for the next planting season.

No Till Benefits:

- ✓ Enhances decomposition
- ✓ Improves soil condition
- ✓ Promotes integrated pest management
- ✓ Promotes healthy crop growth

General Recommendation:

Application rate of 1-2 quarts per acre, ideally at or after harvest and early season before spring set-up work.
