

FATTENING

Fertilizer 0-9-15+Ca(2) with Micronutrients

Terrafluid Fattening is an advanced 9-15 PK fertilizer with non-ionic phosphorus, potassium, and calcium and addition of micronutrients, Boron, Manganese, and Molybdenum. With the use of supramolecular technology, **Fattening** can be used in continuous fertigation and foliar irrigation during the fruit or grain fattening phase. **Terrafluid Fattening** provides support for optimizing proper fruit or grain fattening, achieving larger fruit or grains, higher specific weight at the same size, and higher fat content.

Fattening Benefits:

- ✓ Improves fruit binding and tissue development
- ✓ Increases fruit size, weight, and firmness
- ✓ Enhances resistance to cracking, lodging, and pathogens
- ✓ Promotes uniform sizing
- ✓ Zero residue

General Recommendation:

	FERTIGATION	FOLIAR APPLICATION
Stone and fruits trees, vegetables, and row crops	13 to 64 us fl oz per acre per application	13 to 64 us fl oz per acre per application
<i>Do not exceed 0.5 gallons per acre in foliar Do not exceed 0.5 gallons per acre in fertigation</i>
