

FLOWERING

Fertilizer 0-9-15+Ca(2) with Micronutrients

Terrafluid Flowering is an advanced 12-2 PK fertilizer based on non-ionic phosphorus and potassium, with microelements and partially complexed amino acids with the use of supramolecular technology. **Flowering** focuses on optimizing abundant flowering, a well-formed flower and pollen tube, and to prepare the plant for good fruit set. It improves the quality of flowering and fruit set, even in challenging conditions, while extending pollination time and promoting pollen tube formation for better fertilization. The formula also boosts nectar quality, increasing attractiveness to pollinators.

Flowering Benefits:

- ✓ Improves flowering and fruit set quality
- ✓ Enhances pollination and pollen tube formation
- ✓ Supports water balance and climate stress resistance
- ✓ Ensures 100% phosphorus assimilation
- ✓ Reduces carbon footprint
- ✓ Zero residue

General Recommendation:

	FERTIGATION	FOLIAR APPLICATION
Stone and fruits trees, vegetables, and row crops	13 to 64 us fl oz per acre per application	13 to 64 us fl oz per acre per application
<i>Do not exceed 0.5 gallons per acre in foliar</i> <i>Do not exceed 0.5 gallons per acre in fertigation</i>
