

THYME PROW™

Systemic Fungicide, Bactericide, and Insecticide

Thyme Prow™ is an advanced agricultural solution derived from thyme oil extract. It features broad-spectrum properties, acting as a fungicide, bactericide, and insecticide. This product offers both systemic and contact action. Its innovative molecular structure effectively targets the cell membranes of bacteria and fungi, ensuring efficiency while preventing the development of resistance. **Thyme Prow** highly effective against row crop diseases such as Southern Rust, Fusarium, Tar Spot, and other crop diseases such as Powdery Mildew and Citrus Greening (HLB). The insecticidal properties are effective against sucking insects.

Thyme Prow™ Benefits:

- ✓ Effective against major row crop diseases
- ✓ Helps preserve crop yield and quality
- ✓ Controls sucking insects
- ✓ Safe for all food and non-food crops

General Recommendation:

Dilute at a ratio of 1 quart per acre in a minimum 5 gallons and up to 30 gallons of water per acre. Apply early in the season when disease presence occurs or as a preventative. Apply via foliar spray or soil drench. For best results, apply via foliar. Reapply, as needed, every 10 - 14 days to maintain desired level of control.
